Oriental motor

PRODUCT GUIDE

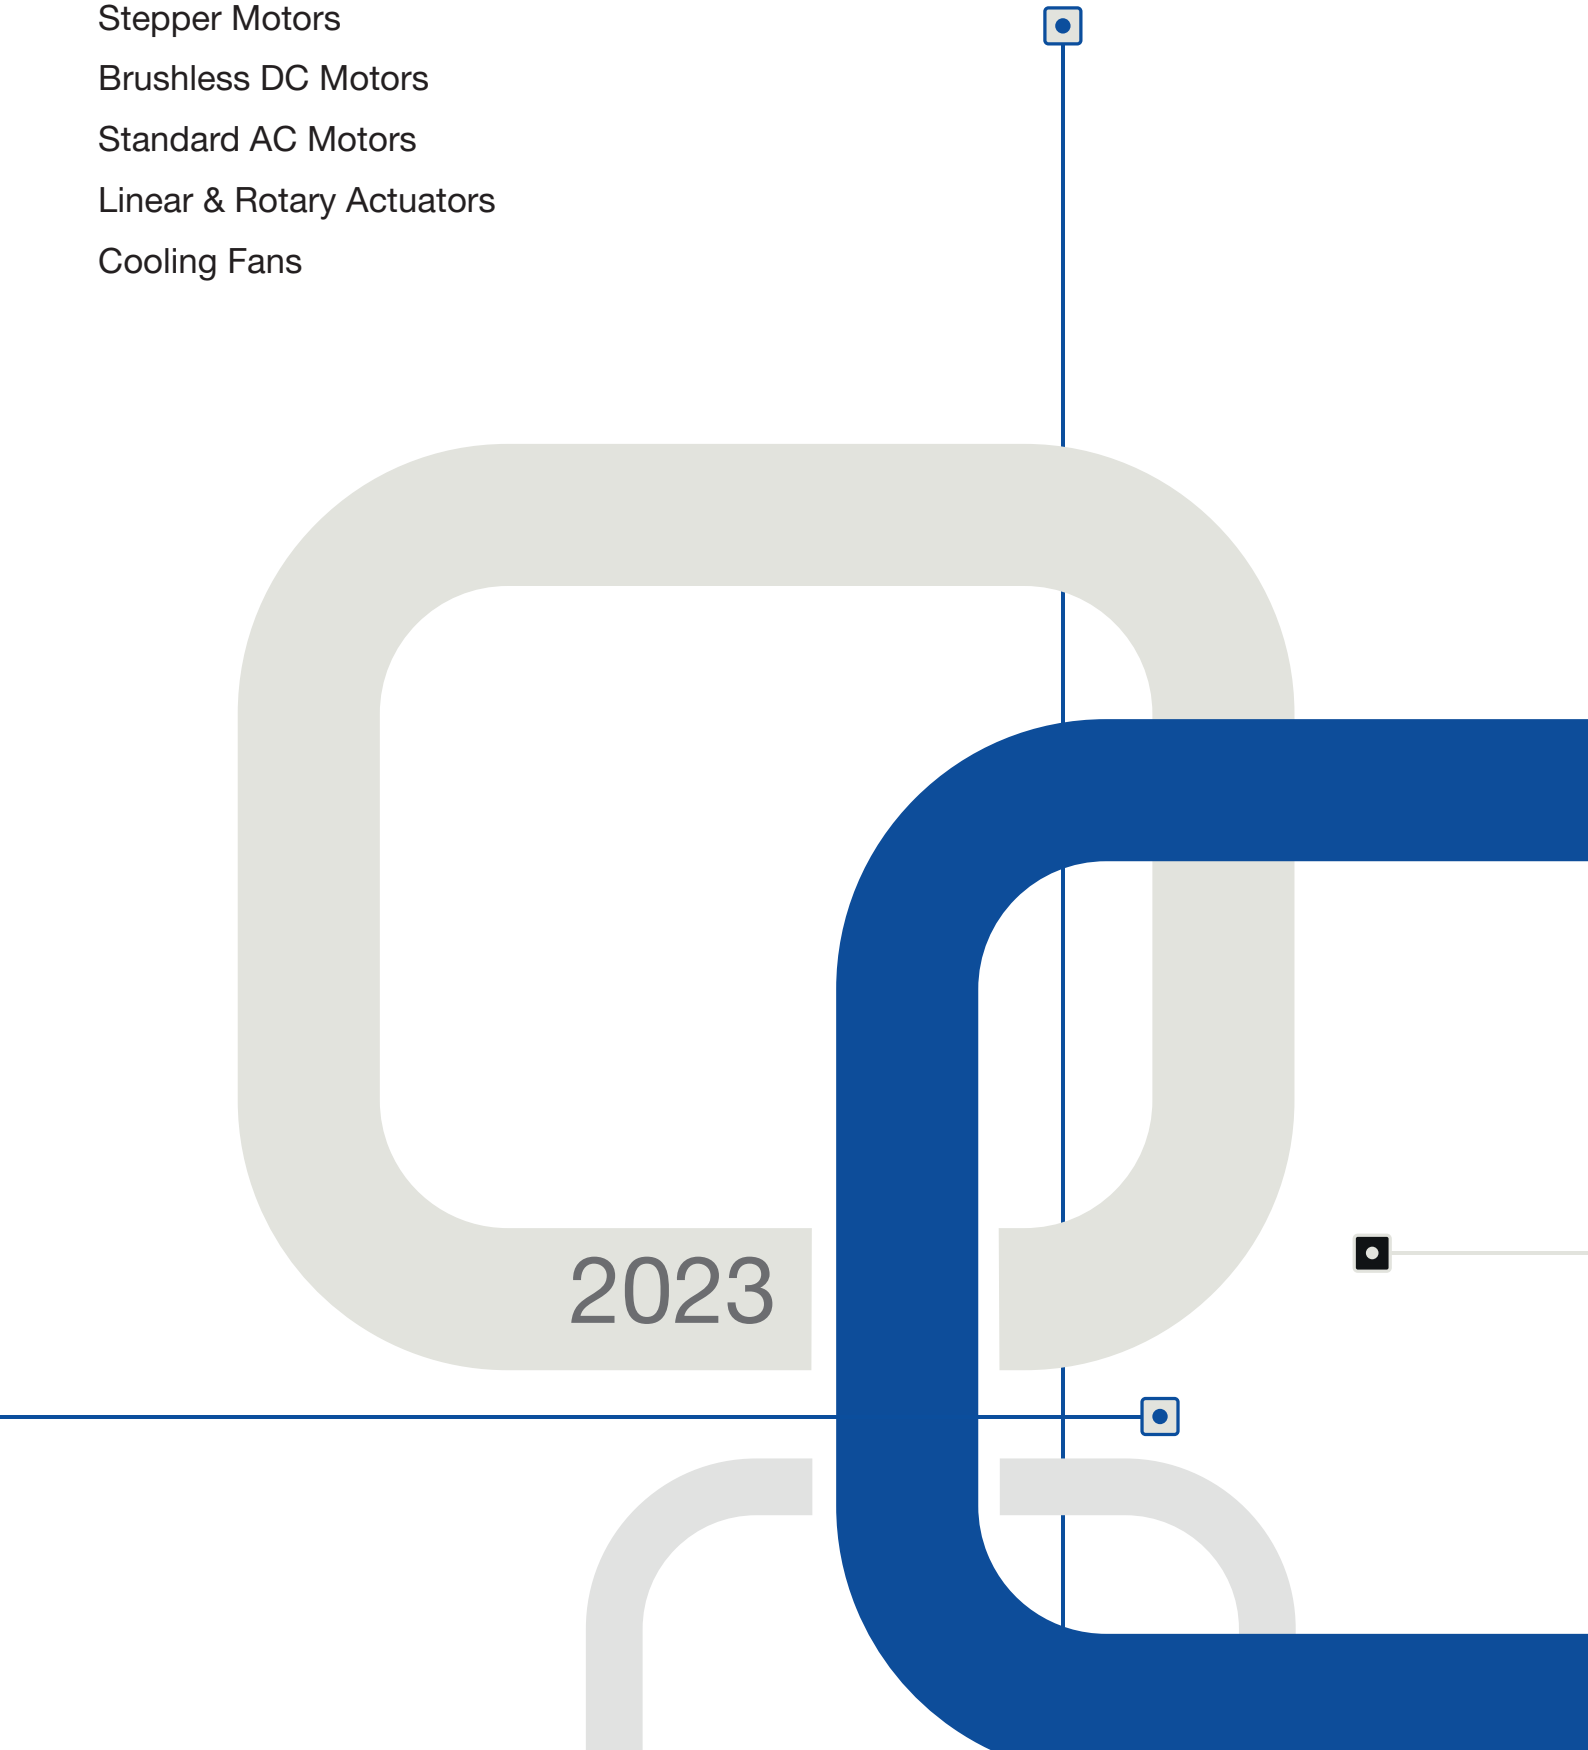
Stepper Motors

Brushless DC Motors

Standard AC Motors

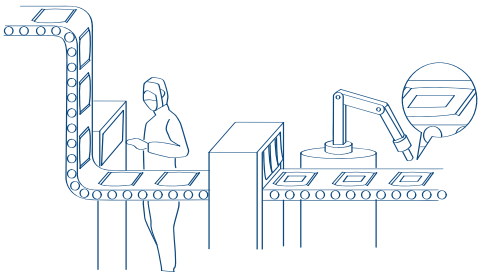
Linear & Rotary Actuators

Cooling Fans



AVAILABLE WORLDWIDE, STARTING FROM A SINGLE UNIT

We contribute to society by broadening the horizons of life and industry.

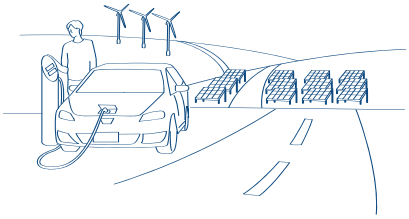


Factory automation

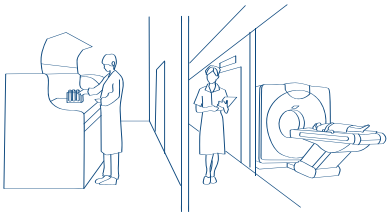
Equipment for manufacturing semiconductors and electronic components

Equipment for food processing/ measurement/packaging

Transport and financial equipment



Renewable energy



Medical equipment

GLOBAL SALES NETWORK

40 countries

Bringing Oriental Motor to the Global Market

Industrial – Medical – Packaging – Material Handling – and so much more.
Worldwide, our refined product development enables daily operations across all fields of business. Honoring our corporate philosophy built on over 100 years of history.
We continually evolve to meet our customers needs wherever they are.

CONTENTS

CLOSED LOOP STEPPER MOTOR AND DRIVER PACKAGES

The **AZ** Series enables absolute positioning without the need for a battery. The total cost is reduced because no additional sensors are required. As a result, the **AZ** Series offers absolute positioning at an economical price.

AZ Series

FEATURES

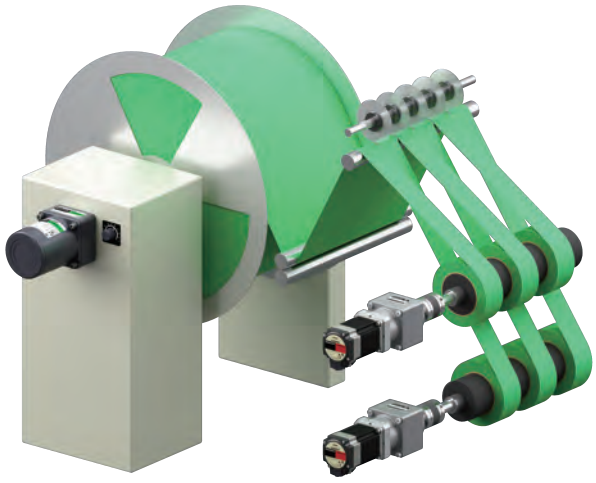
Multirotation Absolute System
Absolute position detection is possible up to ±900 (1800) rotations of the motor shaft from the home position.
For 20/28 mm frame sizes it is ±450 (900) rotations.

No External Sensors
As it is an absolute system, external sensors such as a home sensor or limit sensor are not required.

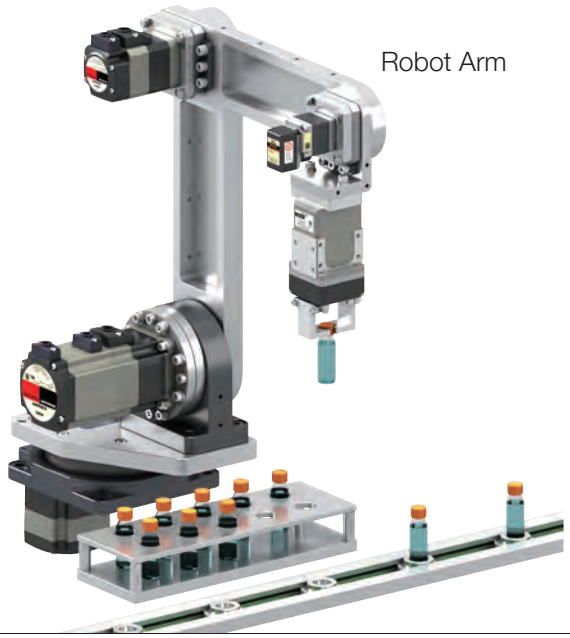
Energy-saving
Energy saving is achieved through high efficiency, reducing motor heat generation.

APPLICATIONS

Slitting Machine



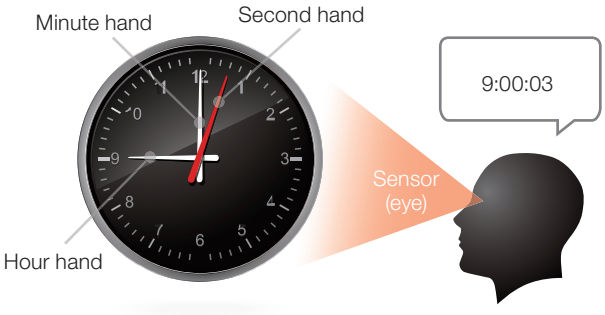
Robot Arm



MECHANICAL SENSOR

Analogue clocks measure the current time based on the positions of the second hand, minute hand and hour hand. The **AZ** Series **ABZO** sensor is a mechanical sensor equipped with multiple gears equivalent to the hands of a clock. The position information is detected based on the angles of the respective gears. No electricity is required, so a backup battery is not neccesssary.

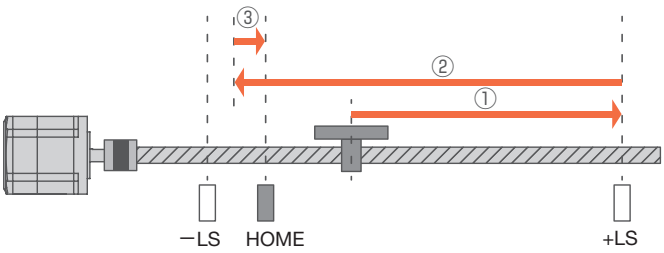
・Basic principles are like an analogue clock



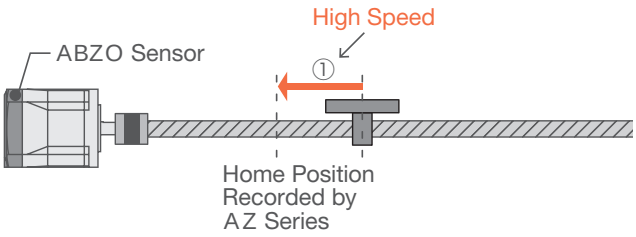
NO EXTERNAL SENSORS

Return-to-home can be performed at high speed without the need to take sensor sensitivity and response time into account, allowing for a shortened machine cycle.

・Standard homing method with limit and home sensors



・High-speed homing method with AZ Series



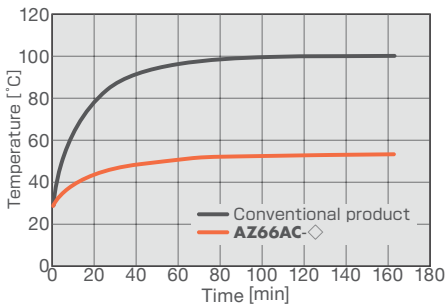
ENERGY SAVING

By using a high efficiency motor, heat generation can be reduced significantly.
Power consumption is reduced by 47 % compared to previous levels.

・Temperature distribution using thermography

Image shows motors operating under the same conditions.

・Motor surface temperature during operation under the same conditions



AZ SERIES

AC AND DC CLOSED LOOP MOTOR-DRIVER PACKAGES WITH ABSOLUTE SENSOR

Max. Holding Torque
0.036 - 157 Nm

Output Shaft Rotation Speed
0 - 6000 r/min

Price from
626.00 €

- Absolute sensor, position control
- No external sensors necessary
- Low heat development
- EtherCAT, EtherNet/IP, PROFINET, Modbus RTU

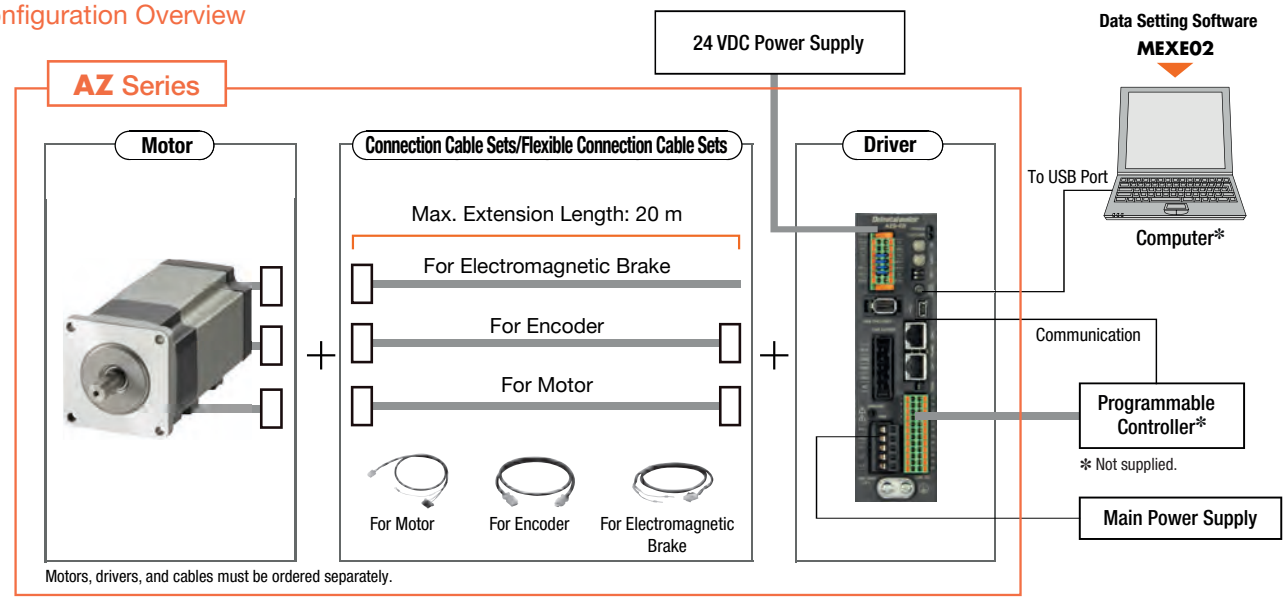
Available from 01/2023

Characteristics Table

Frame Size [mm]	Max. Holding Torque* [Nm]	Resolution [°/Pulse]	Options
20	0.036	0.0036 - 0.36	-
28	0.19	0.0036 - 0.36	-
40	2.5	0.04 - 0.072	Electromagnetic brake, Harmonic gearhead
42	18	0.0036 - 0.36	Electromagnetic brake, Harmonic gearhead, Planetary gearhead, Tapered gearhead, Right-Angle gearhead
60	65	0.0036 - 0.36	
85	140	0.009 - 0.36	Electromagnetic brake, Planetary gearhead
90	52	0.0036 - 0.1	Electromagnetic brake, Harmonic gearhead, Planetary gearhead

*NOTE: Value in combination with Neugart gearboxes. For further questions, please contact your nearest Oriental Motor sales office.

Configuration Overview



αSTEP AZ Series mini driver - DC Input

The αSTEP AZ Series now includes a mini driver option. Compatible with battery power operation for use in a wider range of applications. The mini driver allows for smaller and more power-efficient devices.
· Compact design to fit in small spaces
· Light weight design reduces load on equipment

Various FA-Network Communication

EtherCAT, EtherNet/IP, PROFINET

AZD-KRED
AZD-KREP
AZD-KRPN

Modbus RTU

AZD-KR2D

NEW

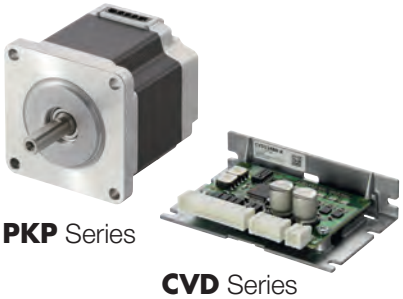
OPEN LOOP STEPPER MOTORS

2-phase and 5-phase high-torque stepper motors are available with a wide variety of frame sizes and motor options. The **CVD** Series drivers are optimally matched to the **PKP** Series motors.



PKP Series

CVD Series

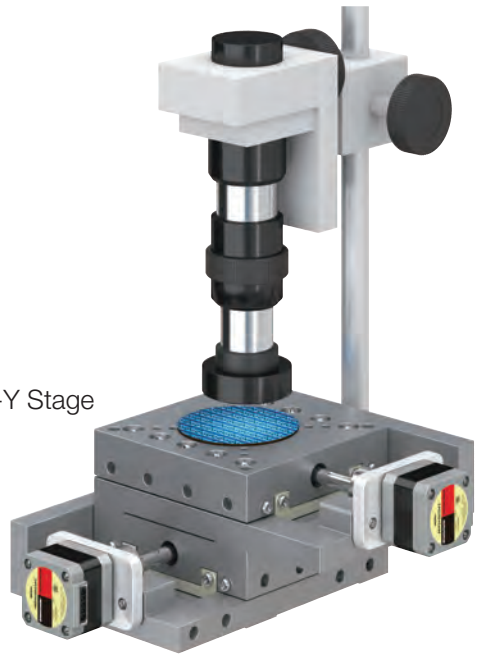
FEATURES

Excellent Synchronisation, High-Response Operation
Stepper motors are ideal for applications requiring frequent starting and stopping.

Holding the Stop Position
Stepper motors are ideal for applications where the low rigidity of the mechanism requires the absence of vibration upon stopping.

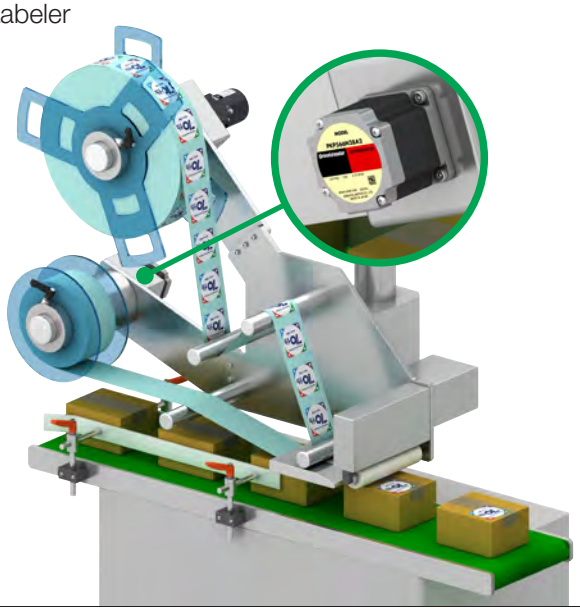
High Resolution Types
High resolution stepper motors have a smaller basic step angle for improved stopping accuracy.

APPLICATIONS



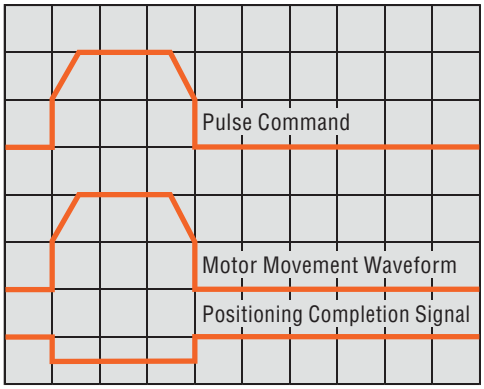
X-Y Stage

Labeler



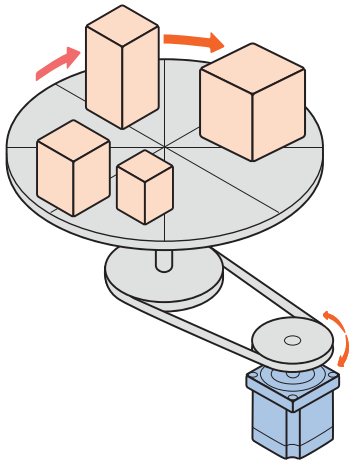
SYNCHRONISATION, HIGH RESPONSE

Stepper motors operate synchronously with commands, generate high torque with a compact body, and offer excellent acceleration performance and response. They are ideal for applications requiring frequent starting and stopping.



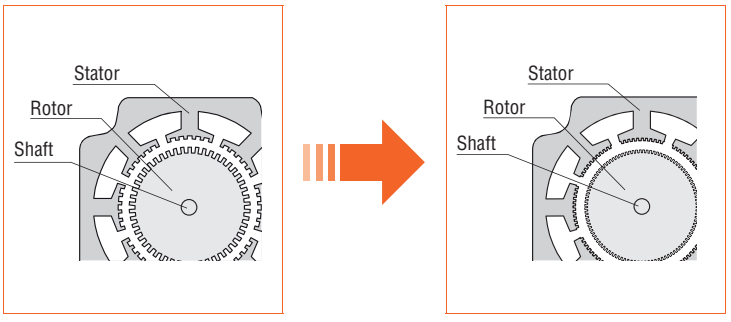
HOLDING THE STOP POSITION

During positioning, the motor stops with its own holding force without hunting. This makes it ideal for applications where the low rigidity of the mechanism requires absence of vibration upon stopping.



HIGH RESOLUTION STEPPER MOTORS

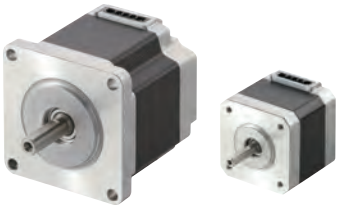
Increased resolution is realised with a higher number of motor teeth. For 1.8° stepper motors the step angle becomes 0.9°, for 0.72° stepper motors 0.36°.



Standard Type (50 teeth)

High-Resolution Type (100 teeth)

2-PHASE STEPPER MOTORS



Max. Holding Torque
0.014 - 9.5 Nm

Basic Step Angle
0.018° - 1.8°

Price from
33.00 €

- High torque in the lower speed range
- Compact design
- Low heat development
- Energy saving

Available from 01/2023

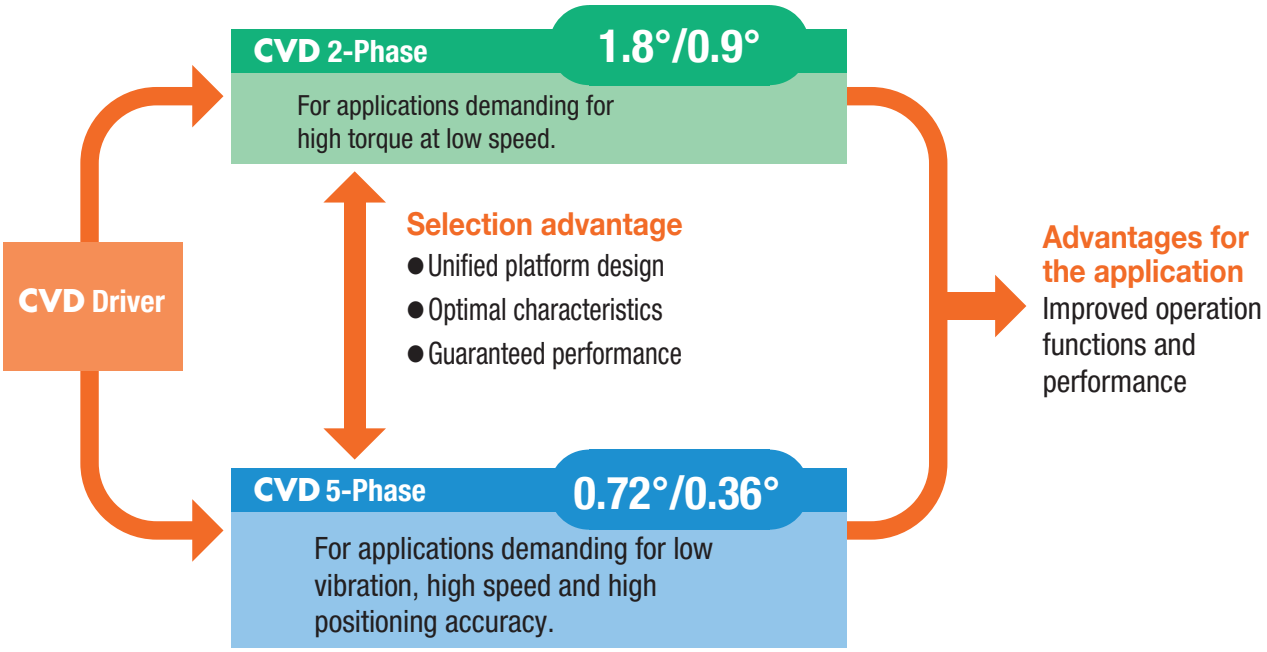
Control Method	With Pulse-Input	With RS485 Interface	With Speed Control
I/O	-	Return to the reference point Positioning mode Speed specification [2-phase/5-phase]	2 speeds selectable only for 5-phase stepper motors
Pulse-Input	1-stroke/2-stroke mode Adjustable microstep resolution	-	-
Modbus (RTU)	-	Return to the reference point Positioning mode Direct Data Operation* Speed control	-

*Operation with direct data means that the parameters for position and speed are overwritten each time.

Problem-free change between 2-phase and 5-phase technology



1.8°/0.9° and 0.72°/0.36° stepper motors use specific drivers that must be selected to match the motor technology used. **CVD** Series 2-phase and 5-phase stepper motor drivers are compatible in terms of function and dimensions. This allows you to select the optimal motor according to your specification, regardless of the motor technology. In addition, the motors are characterised by compactness and low weight.

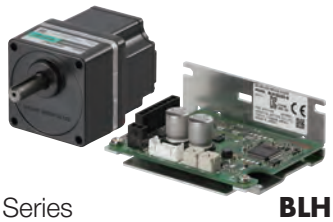
BRUSHLESS DC MOTORS

High-efficiency brushless DC Motors achieve high output in a compact body while delivering high-speed operation, a wide speed control range and constant torque characteristics from low speed to high speed. AC input and DC input types are available.

BLE2 Series



BLH Series

FEATURES

Speed Stability

Speed remains stable even if the weight of the load changes. This is also known as "Speed Regulation".

Alarm Function

Various protective functions such as overload/overvoltage protective functions are equipped. An alarm is an output when a protective function activates.

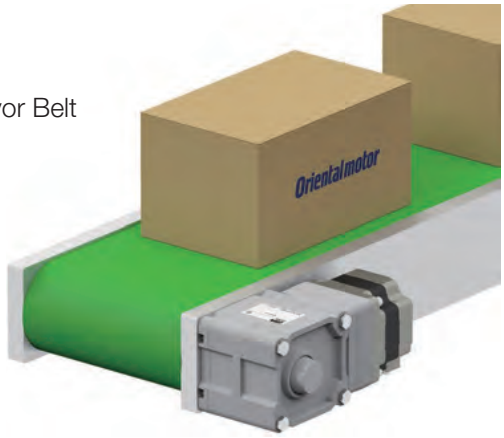
Speed Control

Speed control refers to the ability to manipulate the rotational speed of the motor. Typically, a speed feedback device is needed together with a speed controller.

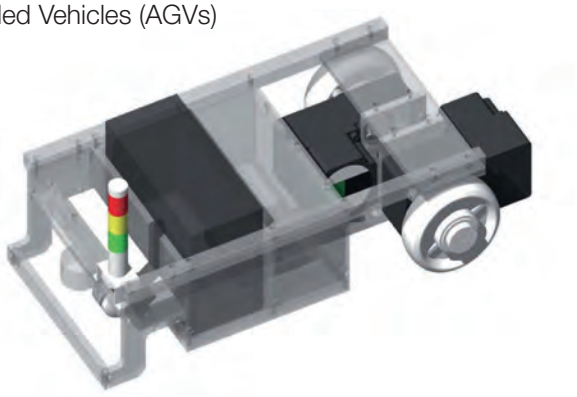
APPLICATIONS

Mixing Machine

Conveyor Belt

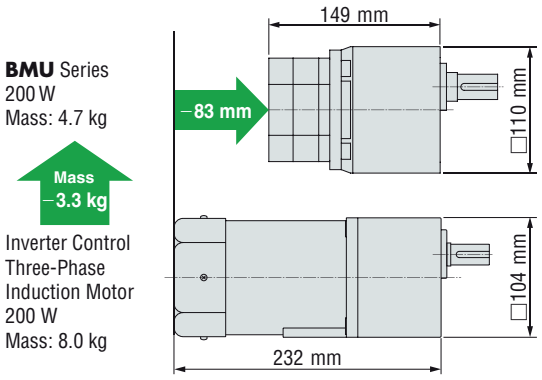


Automated Guided Vehicles (AGVs)



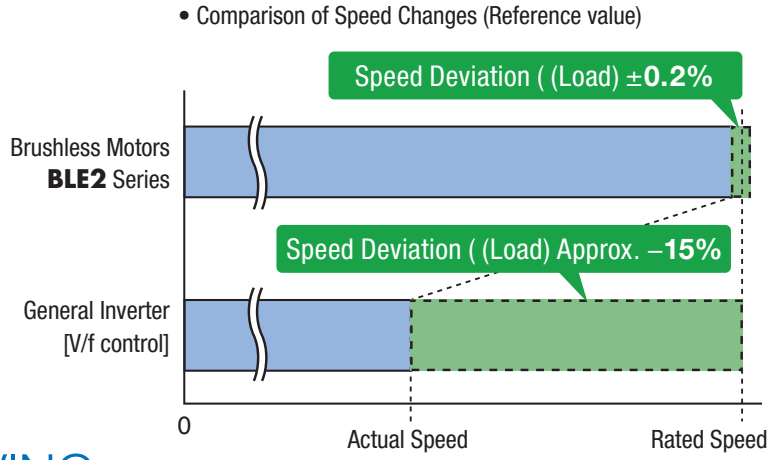
SLIM, LIGHT, HIGH POWER

Brushless DC motors are slim, lightweight, and high power because permanent magnets are used in the rotor portion. This contributes to the downsizing of equipment.
[Comparison Example at 200 W Output Power]



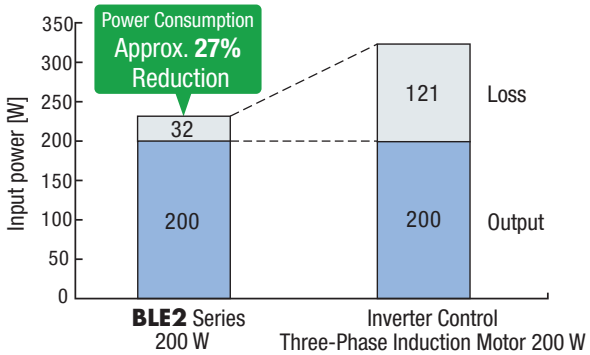
±0.2 % SPEED STABILITY

Brushless DC motor drivers constantly monitor feedback signals from the motor and compare the actual speed against the set speed, adjusting the applied voltage where needed to maintain the set speed. This allows the motor to rotate at a stable speed from low to high speeds even when the load fluctuates.



ENERGY SAVING

Brushless DC motors significantly reduce power consumption as the use of permanent magnets in the rotor portion prevents secondary losses from the rotor. This helps the equipment to save energy.



BLE2 SERIES BRUSHLESS DC DRIVER/MOTOR WITH **AC** INPUT

Output Power
30 - 300 W

Speed Range
80 - 4000 r/min

Price from
342.00 €

- 16 programmable speeds
- Vertical movement possible
- Torque Limit Function
- Up to IP67

Available
from 01/2023

Characteristics Table

Output Power [W]	Speed Range with Gear [r/min]	Max. Permissible Torque [Nm]	Options
30	0.4 - 800	0.2 / 0.54 - 6*	Parallel Shaft Gearhead, Electromagnetic Brake

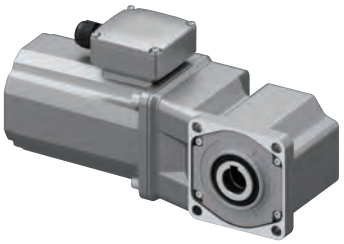
STANDARD AC MOTORS

Standard AC motors are generally utilised as a power source for automated equipment, as these motors can be easily operated by connecting the motors directly to an AC power supply. Oriental Motor offers standard AC motors incorporating various operating functions.

WORLD K Series



KIIS Series

FPW Series

FEATURES

Easy Operation
Simply connect directly to an AC power supply. Models available for all common international mains voltages.

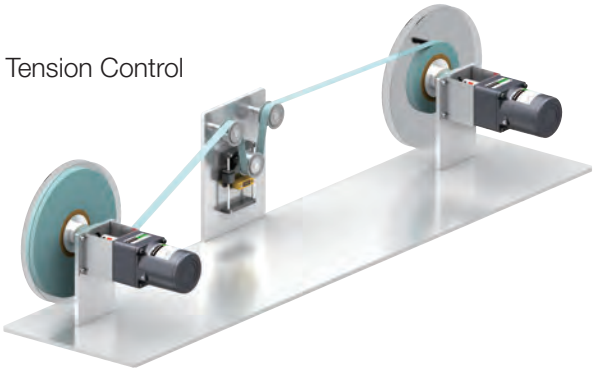
Speed Control Operation
Using a three-phase motor in combination with an inverter enables speed control operation.

Watertight, Dust-Resistant Motors
AC motors which are watertight, dust- resistant and conform to the IEC Standard IP67 are available.

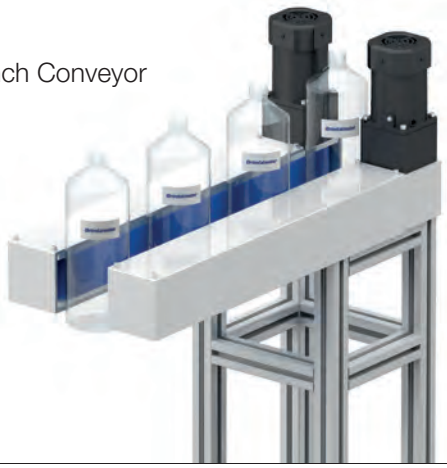
APPLICATIONS

Belt Conveyor

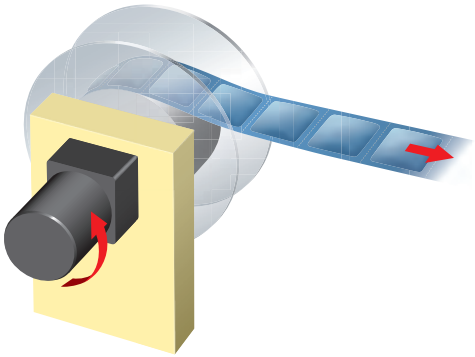
Tension Control



Pinch Conveyor

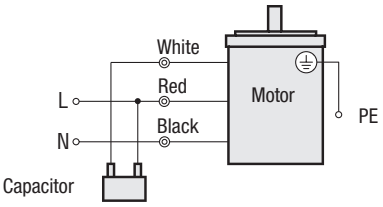


Packing System

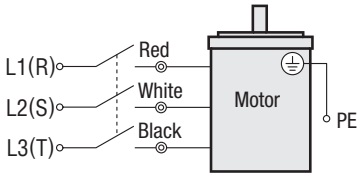


EASY OPERATION

Standard AC motors include three-phase motors for use with a three-phase power supply and single-phase motors for use with a single-phase power supply. A single-phase motor can be operated simply by connecting it to a single-phase power supply via the supplied capacitor. A three-phase motor does not require a capacitor, simply connect the motor directly to a three-phase power supply.



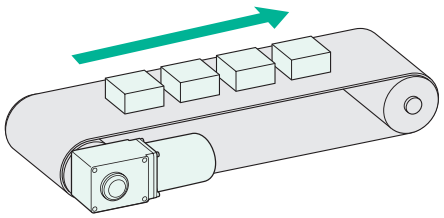
Induction Motors: Connection example for single-phase power supply input type



Induction Motors: Connection example for three-phase power supply input type

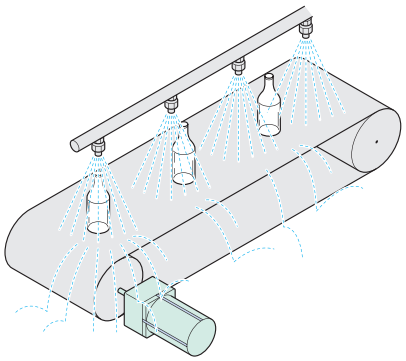
SPEED CONTROL OPERATION

A wide speed control range is possible, with high-torque available even at low speeds. These high-performance motors see little speed reduction even under large loads, ensuring that stable speed control is possible.



WATERTIGHT AND DUST-RESISTANT IP67 PERFORMANCE

Watertight, dust-resistant geared induction motors which conform to the IEC standard IP67 are available. Suitable for use in washdown environments.



WORLD K SERIES

CONSTANT SPEED MOTORS, INDUCTION MOTORS, REVERSIBLE MOTORS

Output Power
6 - 90 W

Speed Range
1150 - 1650 r/min

Price from
70.00 €

- For continuous operation
- Compact construction
- Simple connection & operation

Available from 01/2023

Characteristics Table

Frame Size [mm]	Output Power [W]	Rated Speed [r/min]	Options
60	6	1150 - 1500	Terminal box (IP65), Parallel Shaft Gearhead, electromagnetic brake
70	15	1200 - 1650	Parallel Shaft Gearhead, electromagnetic brake
80	25 - 60	1200 - 1600	Terminal box (IP54), Parallel Shaft Gearhead, Right-angled gearhead, electromagnetic brake
90	40 - 90	1200 - 1600	Terminal box (IP54), Parallel Shaft Gearhead, Right-angled gearhead, electromagnetic brake

LINEAR SLIDES AND CYLINDERS

Able to operate from low speed to high speed, or with light loads or heavy loads, these electric linear slides and cylinders are easy to use and offer high performance regardless of demanding operating conditions.

EAC Series

EAS Series

EZS Series

APPLICATIONS

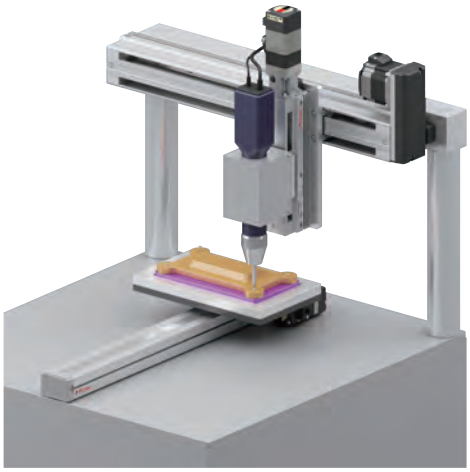
Excellent Synchronization, High-Response Operation
The high response of the closed loop motor and drive system provides superior short-distance positioning.

Stability at Low Speeds
Thanks to the smooth drive function, resolution can be improved without a mechanical element. As a result, speed fluctuation is minimal even at low speeds, leading to improved stability.

Shorter Production Time, Higher Quality
The linear slides and cylinders are guaranteed to provide the specified operating performance. Using them reduces adjustment work and ensures uniform quality.

APPLICATIONS

Screw Tightening

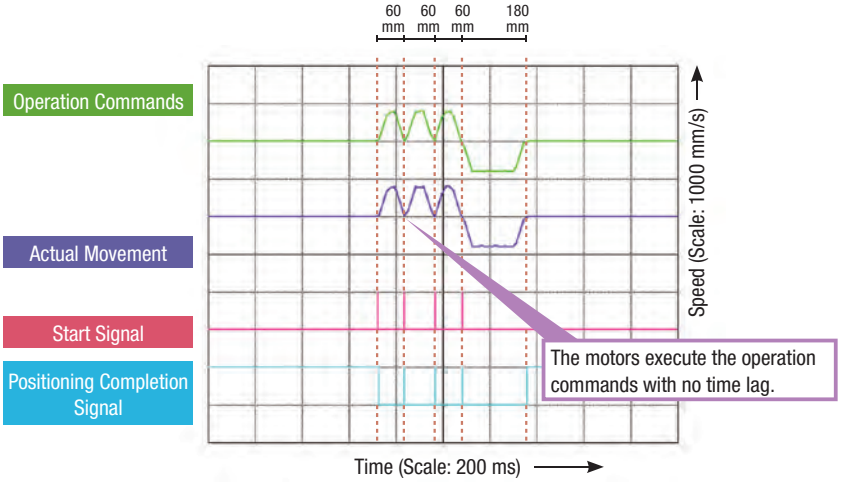


Endurance Testing

SYNCHRONISATION, HIGH RESPONSE

The linear slides and cylinders operate synchronously with pulse commands, generate high torque with a compact body, and offer excellent acceleration performance and response. They are ideal for applications requiring frequent starting and stopping.

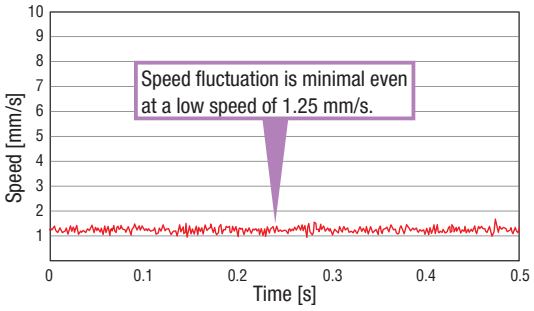
Actual movement of the electric linear slide in relation to operation commands



STABILITY AT LOW SPEEDS

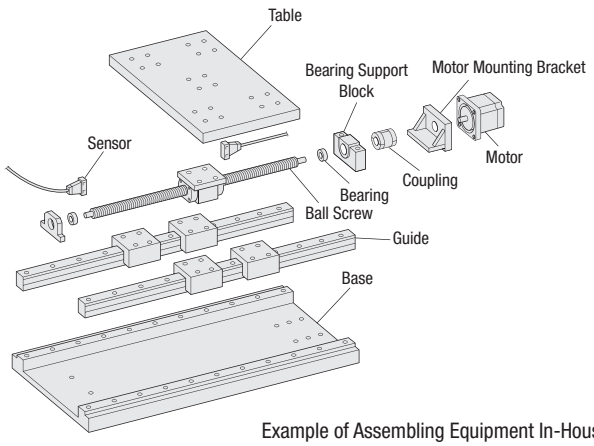
Speed fluctuations are minimal even at low speed.

Actual Slide Table Speed in Relation to Operation Commands (1.25 mm/s)



SHORTER PRODUCTION TIME, HIGHER QUALITY

When building equipment in-house by assembling a motor and mechanical components, the quality of assembly affects the traveling resistance and position accuracy. Therefore, adjustment will be needed. In comparison, Oriental Motor actuators come in one unit shortening the production time and ensuring uniform quality.



Example of Assembling Equipment In-House

EAC SERIES

AC AND DC INPUT ELECTRIC CYLINDERS WITH ABSOLUTE SENSOR

Stroke
50 - 300 mm

Transportable Mass
2.5 - 60 kg

Price from
912.00 €

- Battery-free absolute sensor
- No external sensors necessary
- Low heat development
- EtherCAT, EtherNet/IP, PROFINET, Modbus RTU

Available from 01/2023

ROTARY AND LINEAR ACTUATORS

Rotary actuators and linear actuators are a combination of a stepper motor with a hollow rotary table (rotary actuators) and a ball screw (linear actuators). Both actuator types are driven by an **AZ** Series motor with absolute sensor.

DGII Series **DR** Series

FEATURES

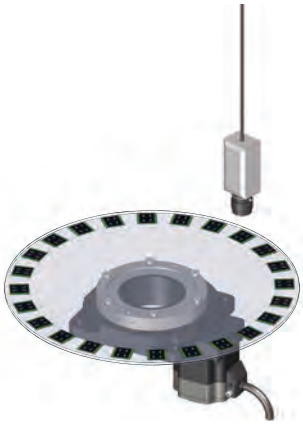
Reduced Installation Time
Compared to in-house construction, both actuators are solutions which are easy and fast to install without the need for adjustment.

Simple Home Position Setting
Thanks to the absolute system no home sensors are required. This simplifies the wiring and reduces costs.

Flexible Installation Orientations
The actuators can be installed in various orientations, making them suitable for a wide range of applications.

APPLICATIONS

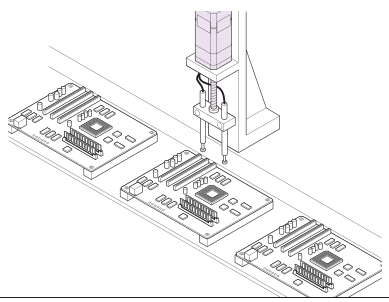
Image inspection



Liquid Dosing

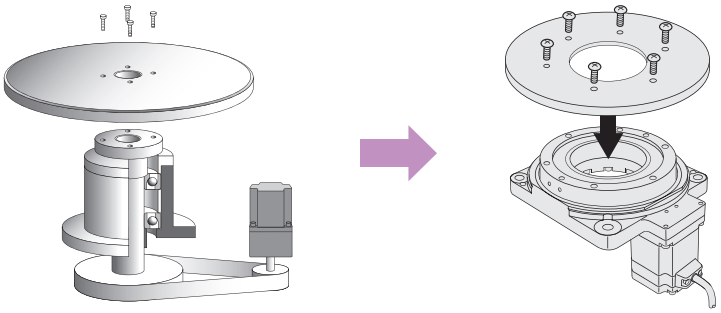
Disc manufacturing

Vertical Positionining of Probes



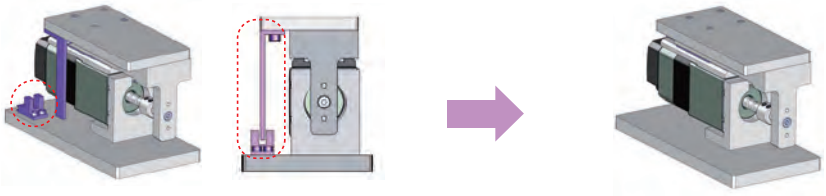
REDUCED INSTALLATION TIME

When using these actuators no additional parts are required. The time necessary for design, component selection, and assembly can be reduced.



SIMPLE HOME POSITION SETTING

Both the rotary and linear actuators are driven by absolute sensor equipped **AZ** Series motors that eliminate the need for reference sensors or limit switches. This reduces costs, simplifies wiring, and removes the need for maintenance.

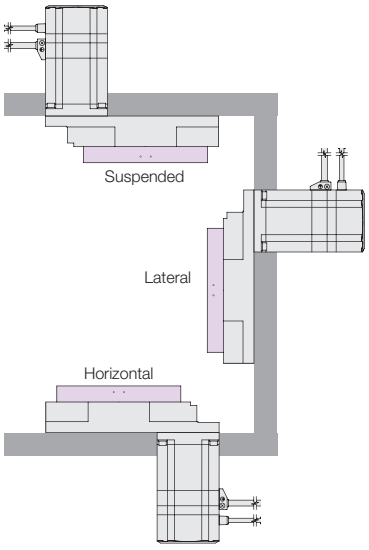


With home sensor

Without home sensor

FLEXIBLE INSTALLATION ORIENTATION

The rotary actuators can be installed horizontally, ceiling-mounted, or wall-mounted. The linear actuators offer front or rear mounting, lateral mounting, and flange and base mounting.



AC AND DC INPUT HOLLOW ROTARY ACTUATORS WITH ABSOLUTE SENSOR

Maximum Speed
600 - 1800 Grad/s

Permissible Moment
2 - 100 Nm

Price from
1,220.00 €

- Battery-free absolute sensor
- No external sensors necessary
- High power, high stiffness
- Large hollow shaft diameter
- EtherCAT, EtherNet/IP, PROFINET, Modbus RTU

Available from 01/2023

ACTUATORS - ELECTRIC GRIPPER

The **EH** Series electric gripper is a combination of an **AZ** Series motor with a rack-and-pinion gripping mechanism. It is ideal for gripping, manipulating, and dimension measuring operations.

EH Series

FEATURES

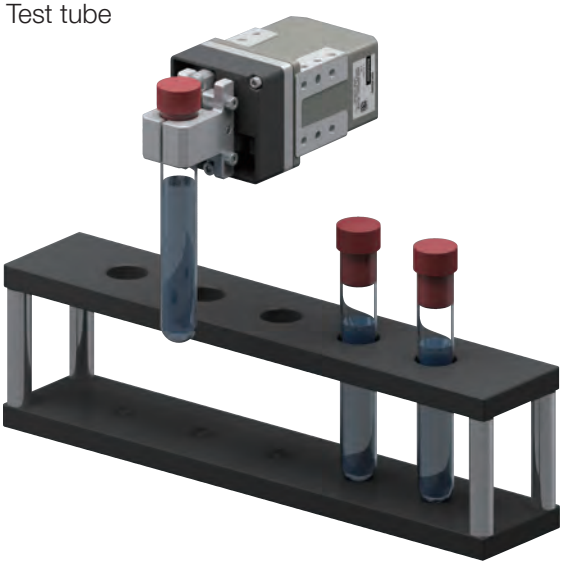
Delicate Grip
A delicate grip is achieved by fine-tuning the grip force in 1 % operating current increments, and implementing a slow approach to the load.

Small and Lightweight
The combination of a 42 mm frame size motor and the rack-and-pinion mechanism results in a compact size. The gripper measures 91 x 46 x 48.5 mm and weights 380 g.

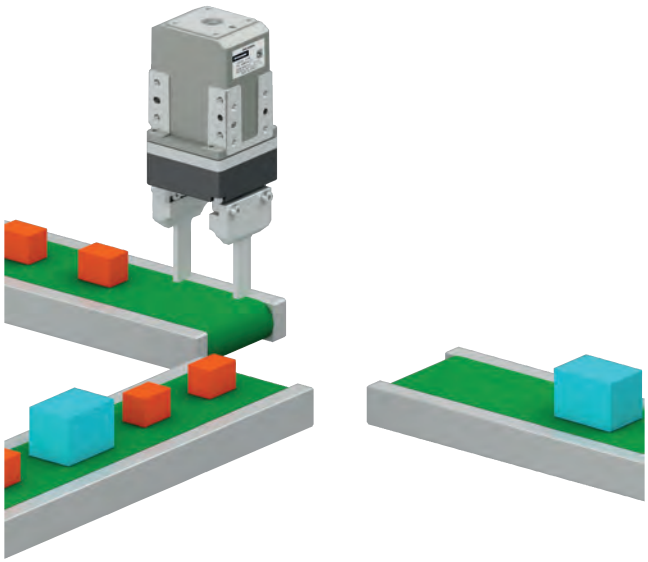
Multi-Surface Installation
The design allows for multi-surface installation, making the gripper ideal for installation on robotic arms, etc.

APPLICATIONS

Test tube

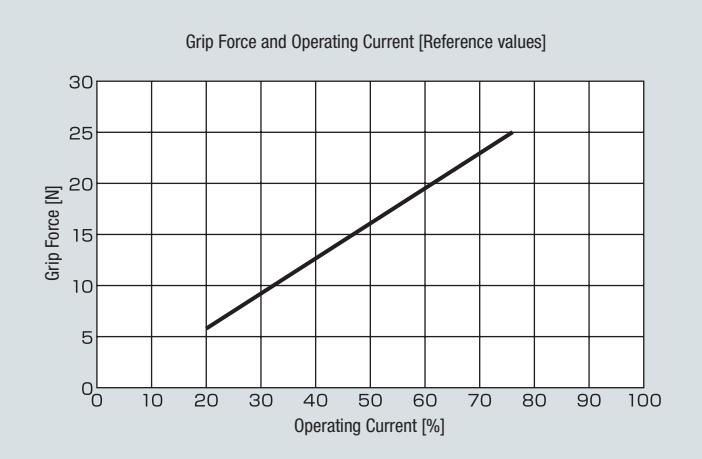


Sorter



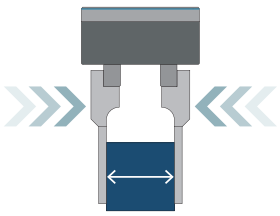
ADJUSTABLE GRIP FORCE

The movement of the electric gripper works by utilizing push-motion operation of the drive motor. The push force (grip force) is set by the operating current of the motor. This allows different gripping movements such as quick approach/slow grip, or low grip force first and gradually increasing grip force thereafter.

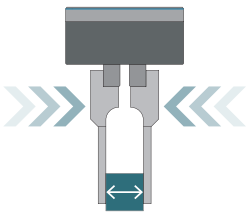


COORDINATION OF LOAD POSITION AND DIRECTION

The minimum travel distance between the pincers attached to the base jaws is 0.02 mm. The direction and position of components can be coordinated by gripping them according to their size.



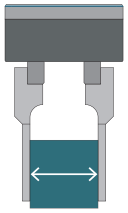
Large load



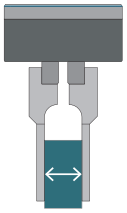
Small load

MEASUREMENT WITHOUT EXTERNAL SENSORS

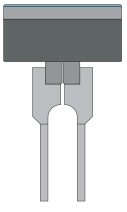
The operational range of the pincer is confirmed by the output signal (TLC output, AREA output) from the driver, allowing the size and presence of a load to be determined.



① OK
(within tolerance)



② NG
(out of tolerance)



③ NG

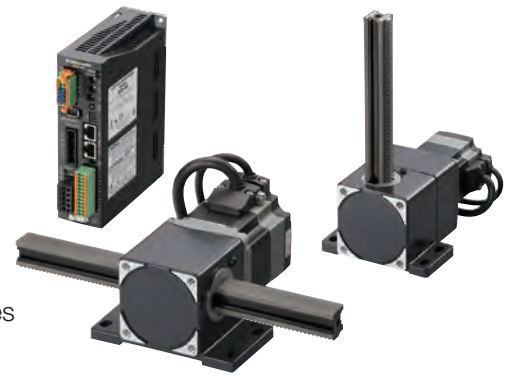
RACK-AND-PINION SYSTEMS

The **L** Series is a linear actuator in which a rack-and-pinion mechanism and a motor have been combined. The series facilitates high positioning accuracy and the transport of high loads up to 100 kg.



L Series

FEATURES

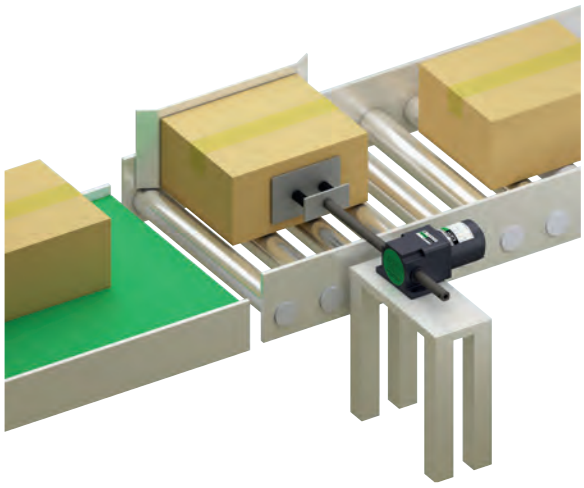
Reduced Design and Assembly Time
The rack-and-pinion system can reduce the number of parts used, and it can also significantly reduce the time spent on design and assembly.

No Home Sensor Required
Return-to-home operation is possible without a home sensor thanks to the absolute system.

Loop Function-Assisted Operation
Loop function operations can be realised even without using a PLC.

APPLICATIONS

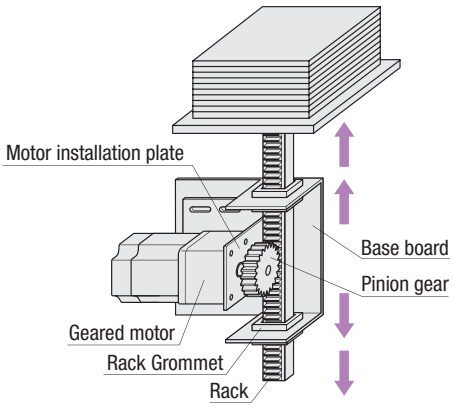
Roller Conveyor



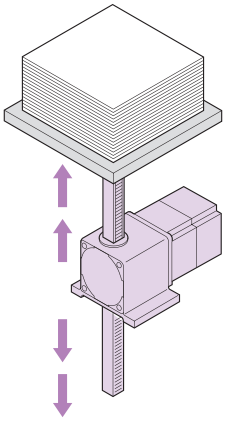
Magazining Printed Circuit Boards

REDUCED DESIGN AND ASSEMBLY TIME

If all the components of a rack-and-pinion drive are purchased separately, design and assembly can take an excessive amount of time. With the **L** Series no complicated assembly is necessary.



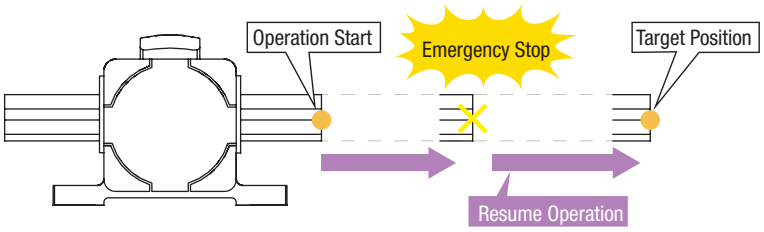
If Parts are Purchased Separately



With Rack and Pinion Systems

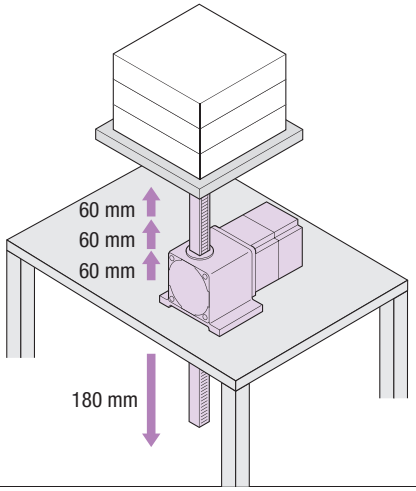
NO HOME SENSOR REQUIRED

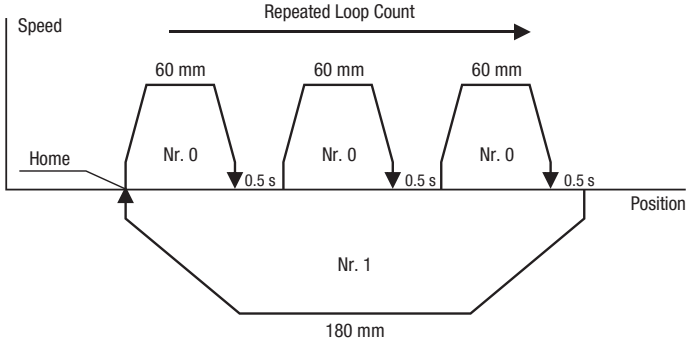
The **L** Series offers an absolute system which eliminates the need for a home sensor. Return-to-home can be performed at high speed without the need to take sensor sensitivity and response time into account, allowing for a shortened machine cycle.



LOOP-FUNCTION

A loop function is where the linked operation data number is repeated to a set number of times. With the **L** Series this is possible even without the use of a PLC.





RACK AND PINION SYSTEM WITH ABSOLUTE SENSOR

Stroke
100 - 1000 mm

Max. Air Flow

COOLING FANS

Axial flow fans use a propeller to generate air flow in the direction of the axis of rotation. Capable of generating a large air flow, axial flow fans are suited for applications requiring ventilation cooling.

MU Series

MD Series

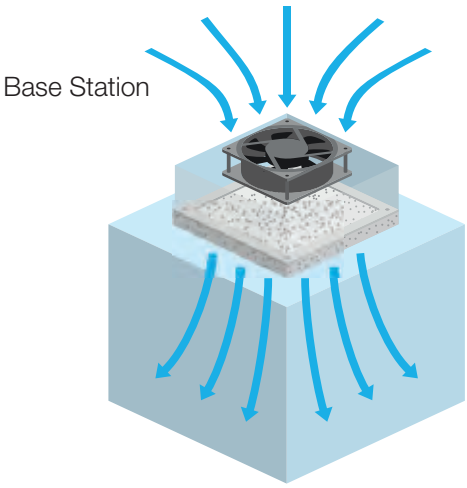
FEATURES

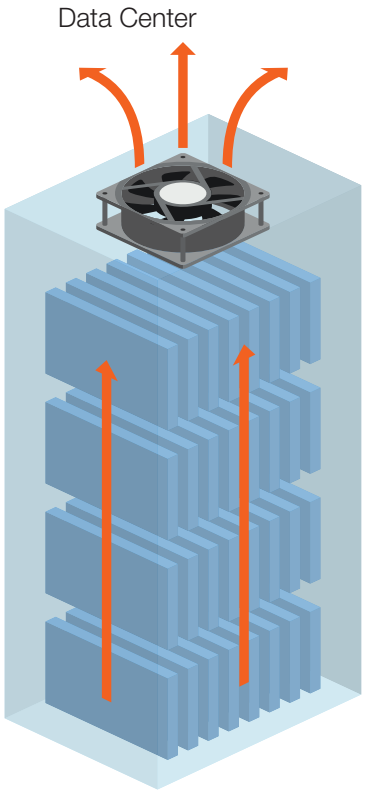
Low noise and power saving
By adjusting the air volume according to the conditions, noise reduction and power saving are possible.

Ideal for Hard to Service Environments
Equipment that is continuously operational and cannot be stopped.

Long life
These axial fans have an expected life of 100,000 hours (approximately 11 years).

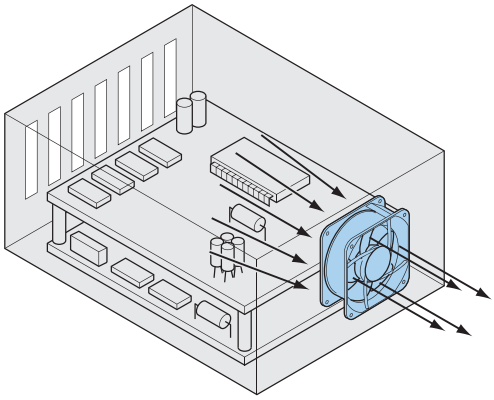
APPLICATIONS





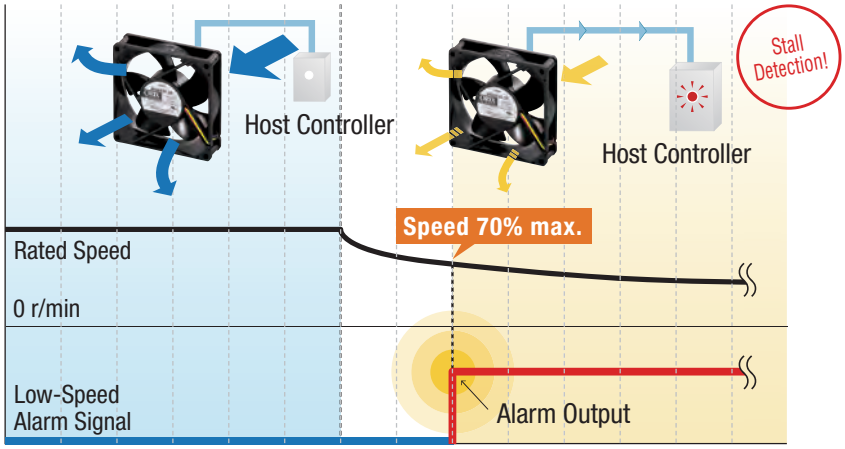
DEVICE VENTILATION AND COOLING

The large air flow of axial flow fans is suitable for ventilation and cooling inside electronic devices.



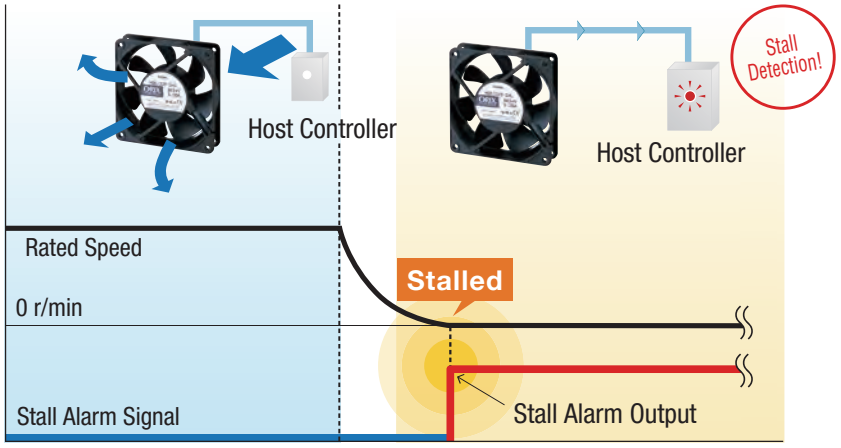
LOW SPEED ALARM TYPES

An alarm is output when the fan speed drops due to the service life of the fan or the ingress of foreign objects.



STALL ALARM TYPE

Outputs an alarm when the cooling fan stops. Quickly stalling tops to allow the cooling fan to be replaced.



AXIAL FLOW FANS FOR **DC** INPUT

High Power - High Efficiency - High Accuracy - Space Saving - Safety - Reliability - Long Life Design - Low vibration - Easy Operation - Low Noise - Standardisation - Low Heat Generation

Motors

Electric Actuators / Gears

Drivers

Fans

The requirements of motion technologies continue to change and evolve with the times. Oriental Motor has built a high-tech system with the ability to focus on everything from elemental technology to advanced production engineering. All of our engineers are equipped with detailed knowledge and understanding of product technologies in a wide range of fields, allowing us to precisely meet the needs of modern automation. Providing solutions to challenging problems, while creating value in people's lives, manufacturing sites, and various areas of society.

Medical Equipment / Analytical Instruments

- CT Scanner
- MRI Scanner
- Denture Manufacturing Equipment
- Blood Analyzer
- Electron Microscope
- Pharmaceutical Packaging Machine
- X-Ray Equipment

Bank and Ticket Machines

- ATM
- ETC Gate
- Counting Machine
- Automatic Ticket Gate
- Automatic Ticket Machine
- Train Seat Rotation Device
- Automatic Doors

In Our Daily Lives

- Interactive Exhibition Machines for Amusement Parks, Recreational Facilities, and Museums
- High Speed Sushi Restaurant Conveyor Belt
- CCTV Camera
- Service Robot
- Security Gate
- Solar Power Generation (Power Conditioner)
- Charging Station for Electric Cars
- Wind Turbine
- Planetarium

Food Machinery

- Checkweigher
- Food Processing Equipment
- Sorting Machine
- Seeding Machine
- Packaging Machine
- Foreign Object Inspection Equipment
- Plant Factory
- Kitchen Instrument

Factory Automation

- Testing Equipment
- Industrial Robot
- Molding Machine
- Washing Machine
- Electronic Component Manufacturing Equipment
- Conveyor Equipment
- Semiconductor Manufacturing Equipment
- Automatic Guided Vehicle (AGV, AMR)
- Cooling Equipment

Solutions for Society

- Automation
- Improved Productivity
- Scientific Development
- Safety / Security
- Energy Saving / Resource Saving

Making “Motion” Scenes More Eco-Friendly

We strive to reduce environmental burdens through products with low environmental impact, while making improvements on energy efficiency as well as conducting appropriate waste management.
In this brochure, we introduce some of our environmental activities that we have been conducting while challenging ourselves to explore new technologies and applications.

Products Contributing to the Global Environment

In order to contribute to the reduction of environmental impact, we utilise the latest technology in our motors and other products to support environmental factors, such as reducing CO_2 through high energy efficiency, and saving resources through compact designs.

Contributing to Reducing CO_2 Emissions Compatible with EU's Ecodesign Directive

The ecodesign directive, which was established by the EU in efforts to achieve the Kyoto Protocol early, is a protocol that imposes a framework of environmental friendliness for all energy-relevant products. Motor-related products are also required to be highly energy efficient. Oriental Motor's induction motors with an output of 120 W and above, along with the cooling fan **MRE** Series (frame size 250 mm), are compatible with the ecodesign directive.

Contributing to Resource-Saving by Achieving Compact Body and High Torque

Reducing the size and weight of products improves resource efficiency (resource-saving), resulting in reduced environmental impact. By reducing the size of the motor, which is the power source, and making it high torque, Oriental Motor contributes greatly to resource-saving by offering resource efficient products.
Furthermore, we support many customers to achieve their resource saving goals by promoting simplified wiring compatible with FA networks.

Standard AC Motor
Three-Phase High-Efficiency Induction Motor

KIIS Series

- Motor achieves energy-saving and high-efficiency through optimal magnetic design and exclusive components.
- Accomplishing an efficiency level of IE4 (200 V type).
  *International standards IEC 60034-30-1
- Fan-less structure
- Degree of protection IP66

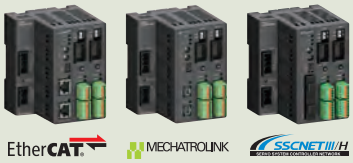
KIIS Series

αSTEP **AZ** Series

Multi-Axis Driver 2-Axis Type
DC Input

- Achieves downsizing* and reducing material usage with dedicated design.
- Contributing to simplified wiring with a driver equipped with consolidated connections to programmable networks and power supply.

* Achieved reducing motor length by approx. 45 % and mass by approx. 38 % compared with a conventional multi-axis driver 2-axis type.



* EtherCAT® is a patented technology and is a registered trademark of and licensed by Beckhoff Automation GmbH (Germany).
* MECHATROLINK is a registered trademark of MECHATROLINK Members Association.
* SSCNETIII/H is a registered trademark of Mitsubishi Electric.

AC Long Life Axial Flow Fans

MRE Series

Frame Size 250 mm

- Achieves higher efficiency with a winding design compatible with power supply specifications in each country, and enabling temperature rise suppression in of the cooling fan motor. Realising the longest product life in the motor industry.
- Expected life of 100,000 hours
- Large air flow

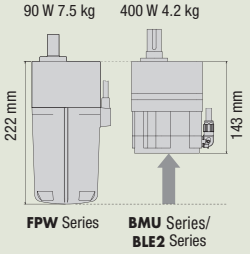
MRE Series

Brushless DC Motor

BMU Series / **BLE2** Series

Dust-Resistant / Watertight

- High-efficiency motor incorporating high-energy density permanent magnets. Achieving compact body yet higher output power compared with a conventional watertight, dustresistant induction motor **FPW** Series.
- Contributing to equipment design with high watertight, dust resistant performance while conforming to the IP67 degree of protection.



BMU Series / **BLE2** Series
